Saab Responds to NATO RFI with GlobalEye

Saab has responded to a Request for Information (RFI) from NATO's Support and Procurement Agency regarding a new generation of surveillance and control capabilities. Saab's response is based on GlobalEye.

NATO will define its new generation capability within the Alliance Future Surveillance and Control (AFSC) project.

"Saab is a proven and trusted part of NATO's defence industrial base and we are present in more than two thirds of the member nations. Our solutions, including GlobalEye, are from the outset developed to be compliant with NATO's requirements. I am confident that we can contribute with important capabilities that will strengthen NATO and benefit the member countries," says Carl-Johan Bergholm, head of Saab's business area Surveillance.

GlobalEye is a multi-domain Airborne Early Warning & Control (AEW&C) solution with an array of active and passive sensors that provide long-range detection and identification of objects in air, at sea and over land. By providing real-time information to units in air forces, armies and navies, GlobalEye enables enhanced situational awareness of the surrounding areas and early detection of threats. It can also be used for non-military tasks such as leading and coordinating rescue missions during natural disasters or larger accidents at sea or on land.
