

Press release 17 October

Saab to Supply MAW 400 Sensors to Hanwha Systems

Saab has secured a contract to supply its cutting-edge MAW 400 sensors for integration into Hanwha Systems' self-protection system.

The journey began when Saab participated in Hanwha's Direct Infrared Countermeasures (DIRCM) development. The resounding success of this program has set the stage for the current order of the advanced MAW 400 sensors.

Under this contract, Saab will supply MAW 400 sensors for the modification of the ROKAF's C-130 aircrafts. These cutting-edge sensors will be seamlessly integrated into Hanwha's self-protection system, significantly bolstering the overall capabilities of the aircraft.

The MAW 400 sensors represent the latest technology in UV (ultraviolet) missile approach warning. With their enhanced data processing capabilities, networking capability, and improved sensor sensitivity, they offer superior threat detection and situational awareness.

"We are proud to partner with Hanwha Systems, one of Korea's leading defense companies. This order strengthens our Electronic Warfare position in the Korean market. We hope to continue this cooperation to the future Korean and global market " said Frans Vermaak, Business Development and Marketing Executive at Saab.

As part of the contract, Saab will provide comprehensive engineering support and training in-country to ensure a seamless integration with the rest of the system.

Saab is a leading defence and security company with an enduring mission, to help nations keep their people and society safe. Empowered by its 20 000 talented people, Saab constantly pushes the boundaries of technology to create a safer, more sustainable and more equitable world. Saab designs, manufactures and maintains advanced systems in aeronautics, weapons, command and control, sensors and underwater systems. Saab is headquartered in Sweden. It has major operations all over the world and is part of the domestic defence capability of several nations.
