

SAAB

FFV ORDNANCE

84 MM HEAT 751

Penetrating force

Tandem warheads exceed the force required
to penetrate the armour of any existing tank

The HEAT 751 tandem warhead for the Carl-Gustaf® M4 explosively penetrates the main armour protection of Main Battle Tanks (MBT) before immediately initiating its charge for devastating effect, even against explosive reactive armour (ERA) tiles. Fin stabilisation and rocket motors provide a flat trajectory and short time of flight to the target.

Initiation of the first charge

EFFECT BEHIND ERA PROTECTION

HEAT 751 will penetrate the ERA-tile with the first charge and strike through the main armour with its main charge.

ANTI-TANK/ARMOUR

HEAT 751 provides dismounted soldiers with the capability to defeat even the modern MBT on the battlefield, a capability that increases the confidence and survivability of your soldiers, capable of penetrating a NATO triple heavy target equipped with ERA.

HEAT 751 can defeat any modern MBT

Technical data

Complete round weight	3.8 kg
Effective range	700 m

Status	Fielded
Ammunition type	Tandem
Warhead design	Unique shaped charge
