Naval Medical Care Solutions

Life-saving care for all conditions

The power to save lives in any location

Modern naval vessels can be deployed to remote locations at a moment's notice.

Having the right medical equipment on board can make all the difference in saving both military and civilian lives.

Saab Naval Hospitals deliver the capability to provide lifesaving medical care, whether at sea, in littoral zones or while alongside. Fully scalable to meet the requirements of different missions and customers, our solutions range from facilities to deal with medical emergencies through to sophisticated, fit-for-purpose onboard hospitals.

Saab is a world leader in naval systems, delivering platforms, integrated systems and sub-systems for the entire maritime domain. This knowledge puts Saab in a unique position to design and build onboard hospitals that provide world-class clinical care.

Fully scalable to meet your needs

Multiple mission types require a flexible approach to on board medical services.

Saab's flexible approach lets you choose the medical services and features that best suit your navy's needs and the intended role of each vessel.

A basic set-up might include a trauma unit and ward wing. Additional facilities can be added, such as an operating theatre, intensive care units and triage and resuscitation facilities to bring a vessel's level of trauma care on par with an established land-based hospital. More comprehensive care options that can be added include a pressure chamber, oxygen generation, dental care facilities, a pharmacy and a medical lab.

Engineered for a wide range of vessel classes

Having a stable platform in which medical staff can work is crucial to delivering care.

Saab works closely with shipbuilders and end customers to design hospital solutions that mitigate the challenges of rough seas through the use of support structures. This collaborative approach to design also delivers a customised fit-for-purpose patient flow.

Saab Naval Hospitals can be tailored to a wide range of combat and support vessels, including, patrol vessels, frigates, destroyers, submarines, support and amphibious ships.

The Norwegian Navy's support ship KNM Maud is fitted with an onboard hospital which is both designed and partly equipped by Saab..

Tailored solutions for every mission

Basic laboratory testing	Dental	ICU	Psychological first aid
Clinical laundry	HVAC	ISO 9001 certified	Triage/resuscitation
CSSD	Hygiene facility	Pharmacy	Ultrasound
Day surgery	Imaging/x-ray	Primary health care	Wards

Modern navies need a capability to deliver medical care 24/7. Saab Naval Hospitals provide a solid platform for providing acute trauma care, even in heavy seas.
