

News from Saab 14 October 2026

Saab to showcase latest naval advances at Euronaval 2026

From 3 to 6 November at Euronaval, Paris, Saab will highlight key advances spanning combat management, surveillance, coastal security and fast attack craft, demonstrating how they can help naval forces address evolving operational challenges in increasingly complex maritime environments. Please visit us in Hall 6, stand H 162.

Among the systems on display will be the latest evolutions of both the proven 9LV Combat Management System and the Fire Control System with the Ceros 200 Fire Control Director. Designed to support modern naval operations, these deliver enhanced operational flexibility, rapid decision-making support and seamless integration across sensors, effectors and external networks, enabling commanders to respond effectively to dynamic mission requirements.

A press briefing on those new systems will be held at the Saab stand, Tuesday 3 November 13:00 CET.

Saab experts will also be on hand to talk about the latest development of Combat Boat 90 (CB90). Traditionally associated with the rapid deployment of troops, CB90 continues to evolve, expanding its role and capabilities to meet the demands of the new naval reality.

Saab will showcase for the first time a new scalable maritime sensor network designed to provide persistent monitoring and enhanced domain awareness across coastal and offshore environments.

Visitors can also learn more about the Sea Giraffe AMB D radar, an advanced naval radar system that delivers reliable air and surface surveillance capabilities. Engineered to perform in demanding operational environments, Sea Giraffe AMB D provides rapid target detection, tracking and situational awareness, supporting naval forces in protecting assets and maintaining operational superiority.

In addition, Saab solutions from across the wide-ranging naval portfolio including mine counter measures, submarines, surface vessels, weapon systems and EW will be on display.
