### **Saab Unveils the Deployable 5G Network 'DeployNet'**

Saab is launching a state-of-the-art, ruggedised, 5G communication system for military and crisis operations at the Umex SimTEX 2022 exhibition in the UAE. DeployNet, locally developed by Saab in the UAE, further demonstrates Saab's commitment to creating world-class Emirati defence and security solutions, for national needs as well as for export to the global market.

A key fundamental for efficient command and control in military and crisis operations is communication. DeployNet provides a scalable 5G/LTE wireless network for the most challenging environments, offering high-capacity bandwidth for today's missions that rely on a multitude of information sources, sensors and user interaction. The compact system, underpinned with robust cyber security, can be deployed rapidly, enabling high-capacity bandwidth in geographically remote areas, or reinforcement of damaged or limited local networks.

"We believe that DeployNet will be a highly valuable asset to both military and civilian markets where there is a requirement for a ruggedised, quickly deployable 5G/LTE network, not just in the UAE but for export globally, particularly in regions without an existing fixed communications network," says Anna-Karin Rosén, Managing Director of Saab in the UAE.

Utilisation of DeployNet delivers the capability for real-time video streaming in high resolution, push-to-talk functionality and data transfer. Scalable, both in terms of user numbers and system range, DeployNet demonstrates advantages in mission scenarios such as base security, search and rescue, reconnaissance, mission training and crisis management. This turnkey solution includes handsets, a power source, administration tools and active telecom equipment that are compact and ruggedised for easy deployment.
