Saab showcases missile system on Oshkosh vehicle at DSEI

The purpose is to demonstrate the possibility to integrate the missile-equipped RBS 70 NG Mobile Firing Unit (MFU) with Saab's ultra-rugged tactical electronics, low-latency video distribution system and the Barracuda Mobile Camouflage System onto the Joint Light Tactical Vehicle (JLTV). Come to Saab's stand H7-210 at DSEI to learn more.

The aim is to address the growing requirements for mobile air defence and strengthen land users capabilities to meet these current and future challenges. Saab's industry-leading MFU uses the RBS 70 NG missile system with its unjammable laser guided missiles, which provide threats with little forewarning and even less means for countermeasures.

The fully integrated multispectral Barracuda Mobile Camouflage System conceals the vehicle while also allowing the JLTV's rapid deployment against air-based targets when needed.

"We are now offering the most modern mobile air defence solution, which is a perfect match with our existing multispectral camouflage capabilities on the JLTV vehicle. We are ready to support Oshkosh's current customers as well as offering this to new users," says Görgen Johansson, head of Saab's business area Dynamics.

The Saab-provided tactical electronics and low-latency video distribution system aid the crew through increased situational awareness of the battlefield.

A partnership between Saab and Oshkosh Defense was announced in June 2022, focused on the fully integrated solution of Saab's Barracuda Mobile Camouflage System (MCS) onto the JLTV.
