# Saab receives order for studies of future underwater capabilities for Sweden

Saab has signed a contract with the Swedish Defence Materiel Administration, FMV, to conduct concept development studies for future underwater capabilities.

The studies are preparatory in nature and will focus on the further development of key technology areas, as well as new technologies for submarines and submarine-related capabilities for Sweden.

Sweden has a long history of evolutionary submarine design and technology development by refining and adding new technologies to already existing solutions through an iterative development process.

“Underwater capabilities are of vital interest for Sweden. Saab’s submarines are among the most modern conventional submarines in the world and a key capability for Sweden. These studies will help ensure that we stay in the forefront of innovation and technological development for years to come”, says Mats Wicksell, Senior Vice President and Head of Saab’s Business Area Kockums.

*Saab is a leading defence and security company with an enduring mission, to help nations keep their people and society safe. Empowered by its over 20,000 talented people, Saab constantly pushes the boundaries of technology to create a safer, more sustainable and more equitable world. Saab designs, manufactures and maintains advanced systems in aeronautics, weapons, command and control, sensors and underwater systems. Saab is headquartered in Sweden. It has major operations all over the world and is part of the domestic defence capability of several nations.*
