Saab and Maxar forge partnership

Saab is pleased to announce a partnership with Maxar Intelligence, a leading provider of geospatial intelligence. This collaboration is set to transform the multi-domain battlespace with cutting-edge space-based capabilities.

Through this partnership, Saab will leverage Maxar's advanced satellite technologies and geospatial intelligence to further develop targeting capabilities, GPS-resilient systems and advanced C5ISR solutions (Command, Control, Communication, Computers, Cyber, Intelligence, Surveillance, and Reconnaissance). The initiative aims to create robust and intelligent systems that can operate effectively even in GPS-denied environments, ensuring greater operational capabilities on the modern battlefield.

"Our collaboration with Maxar represents a significant leap forward in our commitment to use information from the Space domain and thereby enhancing the strategic defence capabilities of Europe and beyond," says Görgen Johansson, head of Saab business area Dynamics.

"By integrating Maxar's high-end geospatial insights and satellite capabilities with our advanced defence systems, we are setting new standards in the effectiveness and reliability of military operations across multiple domains."

Saab is a leading defence and security company with an enduring mission, to help nations keep their people and society safe. Empowered by its 25,000 talented people, Saab constantly pushes the boundaries of technology to create a safer and more sustainable world. Saab designs, manufactures and maintains advanced systems in aeronautics, weapons, command and control, sensors and underwater systems. Saab is headquartered in Sweden. It has major operations all over the world and is part of the domestic defence capability of several nations.
