CARL-GUSTAF® M4

Whatever the mission, whatever the target

Delivering the tactical flexibility
you need, when you need it

Setting the standards

The Carl-Gustaf® M4 is a man-portable multi-role weapon system that provides high tactical flexibility through its wide range of ammunition types.

Since 1948, the Carl-Gustaf® has been supporting dismounted infantry around the world in dealing with a full range of battlefield challenges. A marked evolution in the history of the system, the M4 model meets the needs of modern conflict environments, while offering compatibility with future innovations.

Saab's thinking edge has enabled us to build on almost 75 years of heritage and technological development to offer a weapon system with innovation at its core. With the Carl Gustaf® M4, you can overcome any tactical situation.

The Carl-Gustaf® M4 represents an evolution in the capabilities of infantrymen. To see its multi-role flexibility in action is to understand the true impact this system will have on tomorrow's ground combat operations. Its features include:

LIGHTER

Builds upon the success of its predecessor by offering an even shorter length and a weight of less than 7 kilos.

FLEXIBLE SIGHT OPTIONS

Compatible with a broad range of sight options, including the Fire Control Device (FCD) 558, which greatly increases the likelihood of a first-round hit.

IMPROVED ERGONOMICS

Improved ergonomics enables soldiers to adjust the weapon to suit them. Includes an adjustable shoulder rest and front grip.

REDUCED ACTION TIME

Can be carried loaded to enable the user to act faster.

ROUND COUNTER

Integrated shot counter for improved logistics and maintenance.

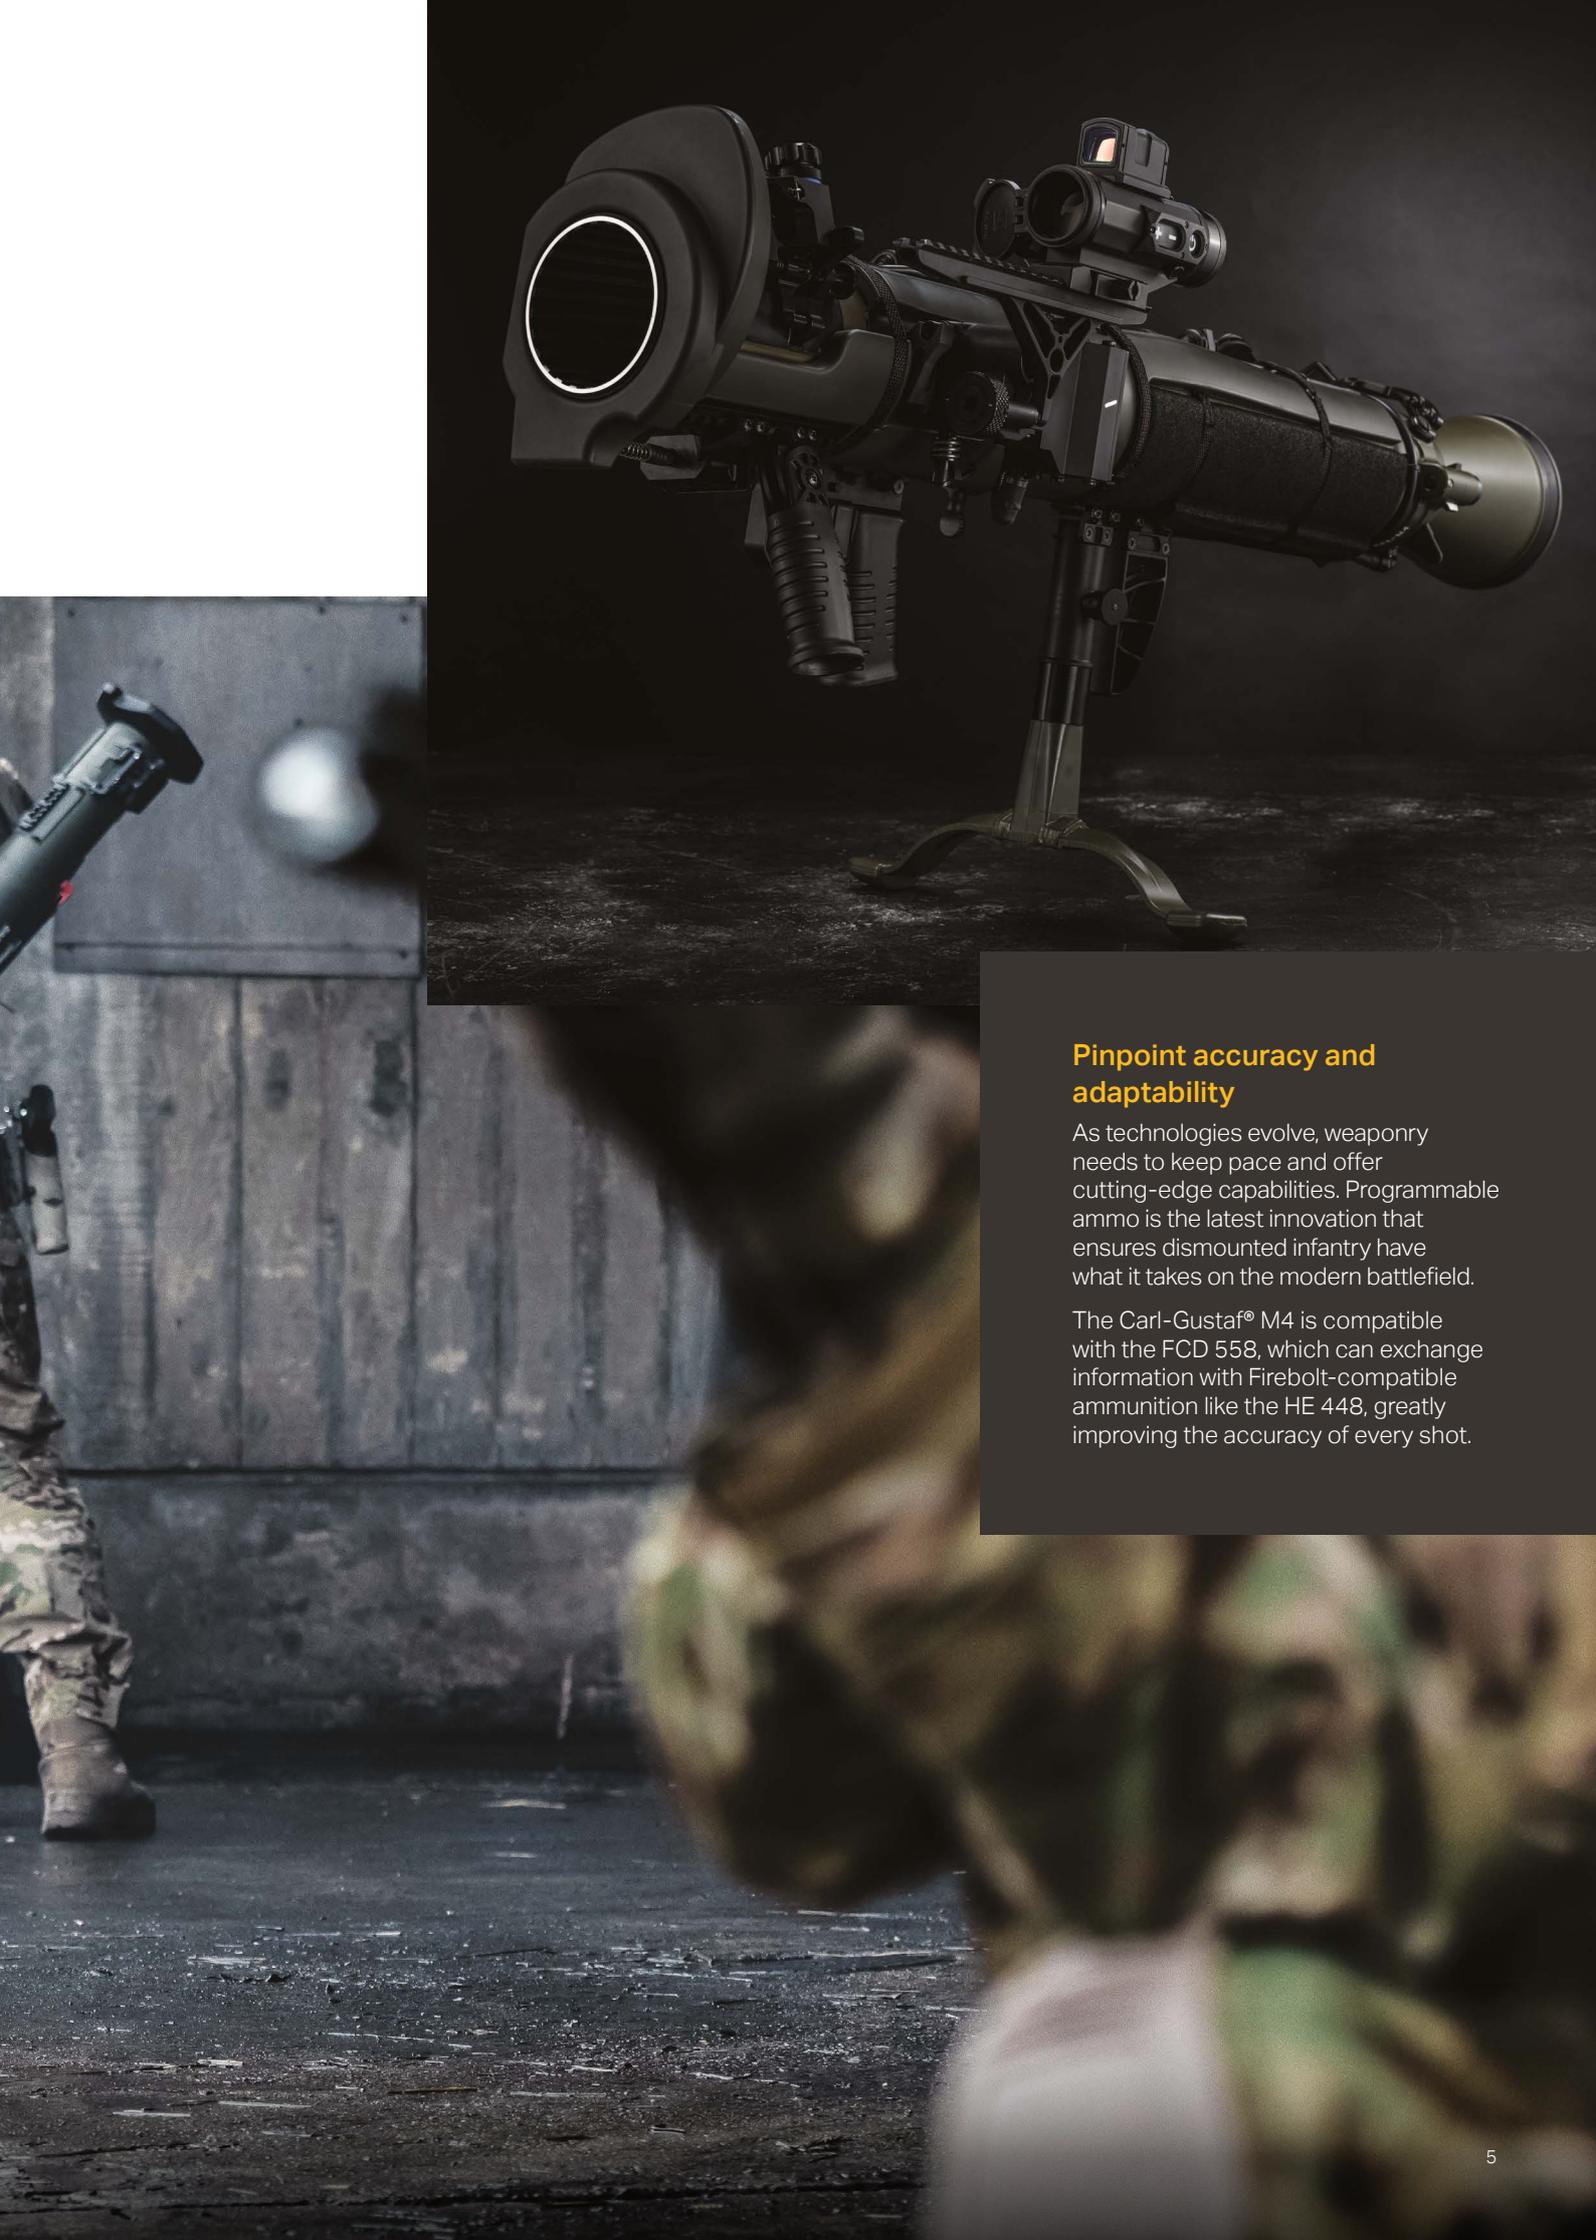

Act decisively

Get the job done faster

On the modern battlefield, speed can mean the difference between life and death for dismounted infantry. Operational success depends upon soldiers that can react quickly and effectively in any tactical situation.

The Carl-Gustaf® M4 won't slow you down. It builds upon the success of its predecessor by offering an even shorter length and a weight of less than 7 kilos, helping your troops remain agile.

Pinpoint accuracy and adaptability

As technologies evolve, weaponry needs to keep pace and offer cutting-edge capabilities. Programmable ammo is the latest innovation that ensures dismounted infantry have what it takes on the modern battlefield.

The Carl-Gustaf® M4 is compatible with the FCD 558, which can exchange information with Firebolt-compatible ammunition like the HE 448, greatly improving the accuracy of every shot.

One step ahead

Today's dismounted infantry face a broader range of battlefield challenges than ever before. Having a single weapon for all situations increases their tactical flexibility and reduces the amount of equipment that they need to carry.

The Carl-Gustaf® M4 multi-role system is the solution. It enables soldiers to deal with any tactical situation – from neutralising armoured tanks or enemy troops in defilade, to clearing obstacles and engaging enemies in buildings.

Carry the advantage

The Carl-Gustaf® system's combat flexibility comes from its range of specialised ammunition. Whether you want to destroy a structure or illuminate the night sky, the Carl-Gustaf® M4 is for you.

SUB-CALIBRE TRAINERS

FULL-CALIBRE PRACTICE ROUNDS

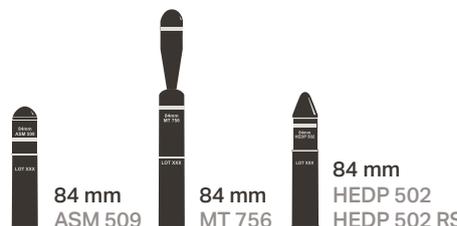

ANTI-ARMOUR

SUPPORT

MULTI-ROLE/ ANTI-STRUCTURE

ANTI-PERSONNEL

Training

Sub-calibre trainers and full-calibre practice rounds and simulators are available to meet system training requirements.

Bespoke, cost-effective solutions, from gunnery training to force-on-force exercises, are available.

Switching to the M4 represents a low-cost option for training requirements and equipment due to full compatibility with existing training equipment and ammunition.

Sight options

OPEN SIGHT

There are different range scales on the rear open sight. Both the front and the rear part of the open sight are optimised for night operations through the use of illuminated dots.

TELESCOPIC SIGHT

The clip-on telescopic sight is the standard targeting option. It is mounted on a Picatinny rail, giving the user the option of attaching thermal sights or image intensifiers to the weapon for night combat.

RED DOT SIGHT

A red dot sight can be integrated as an alternative to the open sight. This gives the user improved accuracy, reduced reaction time and, with night vision goggles, night fighting capability.

FIRE CONTROL DEVICE

The M4 is compatible with advanced fire control devices. No range knobs are needed as the devices have built-in ballistics data for all Carl-Gustaf ammunition, allowing for rapid and accurate engagement. Other features include improved sensors for temperature and air pressure, along with optical and night capability.

Overcome any tactical situation
