

TactiCall - Maritime Communication System

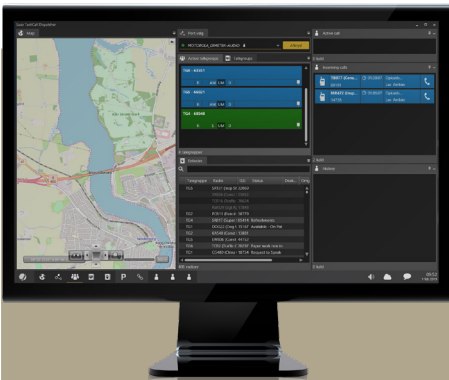

TactiCall - Maritime Communication Solution

Maritime Communication Solution comprises a fully IP based radio system which can be configured to support the needs and workflows connected to any type of coastline. TactiCall MCS integrates systems such as GMDSS, incident management, VTS, SAR operations, radio sites etc. into one effortless manageable platform - scalable and modular to be able to fit any type of operational environment.

TactiCall Dispatcher Suite - Radio Dispatch Operations

TactiCall Dispatcher Suite is a communication platform designed to combine multiple technologies in a single interoperable communication platform. The Dispatcher offers open API's that allow integration into 3rd party Command and Control (C&C) and Computer Aided Dispatch (CAD) workflows, and other applications like GIS, process control, building management, PA/GA and alarm handling applications.

TactiCall Communication - Energy & Industrial Sector

The TactiCall Communication Suite connects all communication technologies regardless of radioband, frequency and hardware. TactiCall provides an intuitive HMI interconnecting old and new systems across platforms and technological borders. TactiCall ensures safe and reliable operations of energy facilities including onshore and offshore oil and gas platforms.
