Steering you in the right direction

Improving efficiency and security with PILOT**CONTROL**

PILOTCONTROL

Investing in PilotControl will streamline the way you manage your pilotage operations – saving you time, raising operating efficiency and ensuring invoices are accurate and ready to send at the press of a button. No matter how big or small your operations, PilotControl can be custom configured to your exact operational requirements.

No more handwritten instructions, no more Microsoft Excel sheets, because everything you need for your operations is at your fingertips on your computer. Easy, user-friendly data input ensures your colleagues have immediate access to the data they need to do their job fast, safe and efficiently. With PilotControl, your colleagues can access all essential information quickly and easily from their laptop, tablet or mobile phone, wherever they are in the office, on board, or underway.

Speed and safety

PilotControl takes the headache out of managing your pilot operations because all essential information is directly accessible at all times to your dispatcher. This means that each pilotage operation is planned with precision and when required, quickly adjusted to synchronise with changes to vessel schedules or port conditions. PilotControl can be integrated with the port management system, which means your dispatcher always has up-to-the minute information on vessel movements.

Most importantly, PilotControl gives your dispatcher an accurate, up-to-the minute overview of pilot availability. In a few easy steps, your dispatcher can ensure the right pilot is assigned to the right job – with the right vessel certification and licences, and availability. Fatigue management is an integral part of the planning. The dispatcher sends the assignment details straight to the pilot's laptop or mobile phone. And the system automatically updates the pilot with any modifications and additions to his assigned task.

For fast, easy, reliable management of your pilotage operations

Flexible and easy to use

PilotControl is a flexible management system that is easily configured to your work schedules, and the rules and regulations of your pilotage organisation - whatever the size of your operation. Because you select the system modules to fit your operations, and each module or the whole system can be updated and modified at any time to meet changing operational requirements.

PilotControl can be accessed and operated remotely by both dispatcher and pilot. This ensures concis ng misunderstandings and errors in information transfer.

PilotControl is user friendly, and requires only a minimum of training for your dispatchers to get to speed with system operations. The system is secure because you control user

privileges, security, interfaces with third party systems and system reporting and messaging. Because PilotControl is web-based, it can be installed and run on your current IT platform, and is fully secure at all times. Saab can update PilotControl remotely and automatically; Saab is only a phone call away wherever you operate worldwide.

Fast, accurate invoicing

PilotControl has an option for billing management that can be tailored to your operational requirements. All data required for billing are automatically generated from the system modules. Alternatively, PilotControl can be linked to your financial system.

The module is easy to use, and consigns billing errors to the past. Using this module, you can be confident your invoices are accurate and based on the latest tariffs and fees. The data interface with your financial system ensures fast and timely invoice dispatch. What's more, real-time, accurate financial data will contribute to better cash flow and increase operational efficiency.

PILOTCONTROL modules

<p>Dispatch Management</p>	<p>This is the core module for managing your pilotage operations and ensures timely assignment of the right pilot with the right qualifications to pilot a vessel in or out of port. The module has an optional function to record the time spent by the pilot on each tasks of the assignment.</p>
<p>License and certificate management</p>	<p>This module records each pilot's licences, certificates and authorisations. A quick and easy check ensures the pilot with the right qualifications is assigned to the job.</p>
<p>Mobile Management</p>	<p>This module communicates directly with your pilots wherever they are, on their mobile or laptop. Each pilot has instant access to the information for their assignment - date, time, vessel and location, weather conditions. The pilots can input their reports, record their activities, and complete their time sheets.</p>
<p>Billing Management</p>	<p>All billable hours and tariffs are combined in this module to automatically generate the client invoice. There is an optional accounts receivable function to track payments and credits.</p>
<p>System Management</p>	<p>This standard module is used to define and track user privileges, security, interfaces with third party systems, and reporting and messaging.</p>

SAAB

Saab Maritime Traffic Management

Saab's PilotControl incorporates best practices in pilotage worldwide and is based on over 30 years of first-hand experience in the maritime sector. Our pilotage management system is operational in small and large ports and harbours around the world - in Europe, in Australia, Canada and USA.

PilotControl is a product of Saab's Maritime Traffic Management business unit, with roots dating back to 1975 and established to serve the

maritime sector worldwide. Along with PilotControl, Saab has developed solutions for management of vessel traffic, port and terminal operations; and coastal surveillance. Our Maritime Traffic Management solutions support pilotage, port authorities, shipping companies and service providers to ensure safe, secure and efficient maritime traffic worldwide.
