

SAAB

Saab Deployable Healthcare (DHC) Solutions

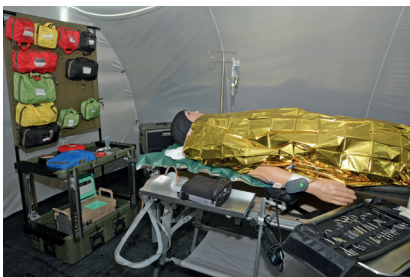

Saab's heritage

Saab serves the global defence and civil security market with world-leading products, services and solutions. Our market offering is broad, comprising proven systems and services developed through extensive research and development. With operations in every continent, we're continuously developing, adapting and improving new technology to meet the changing needs of our customers.

Our DHC solutions are modular, deployable and scalable. The facilities are interoperable with Nordic and NATO forces and, through modularity, adapt to the requirements of any mission. Our expertise in integrating medical systems into combined logistics support brings multiple components together, providing an end-to-end solution to preserve and restore a force's health and fighting strength.

Our products

Saab offers a range of platform-independent capability modules that can be used stand-alone or combined to provide specific capabilities compliant with NATO Role 1, 2F, 2B, 2E, and 3 standards.

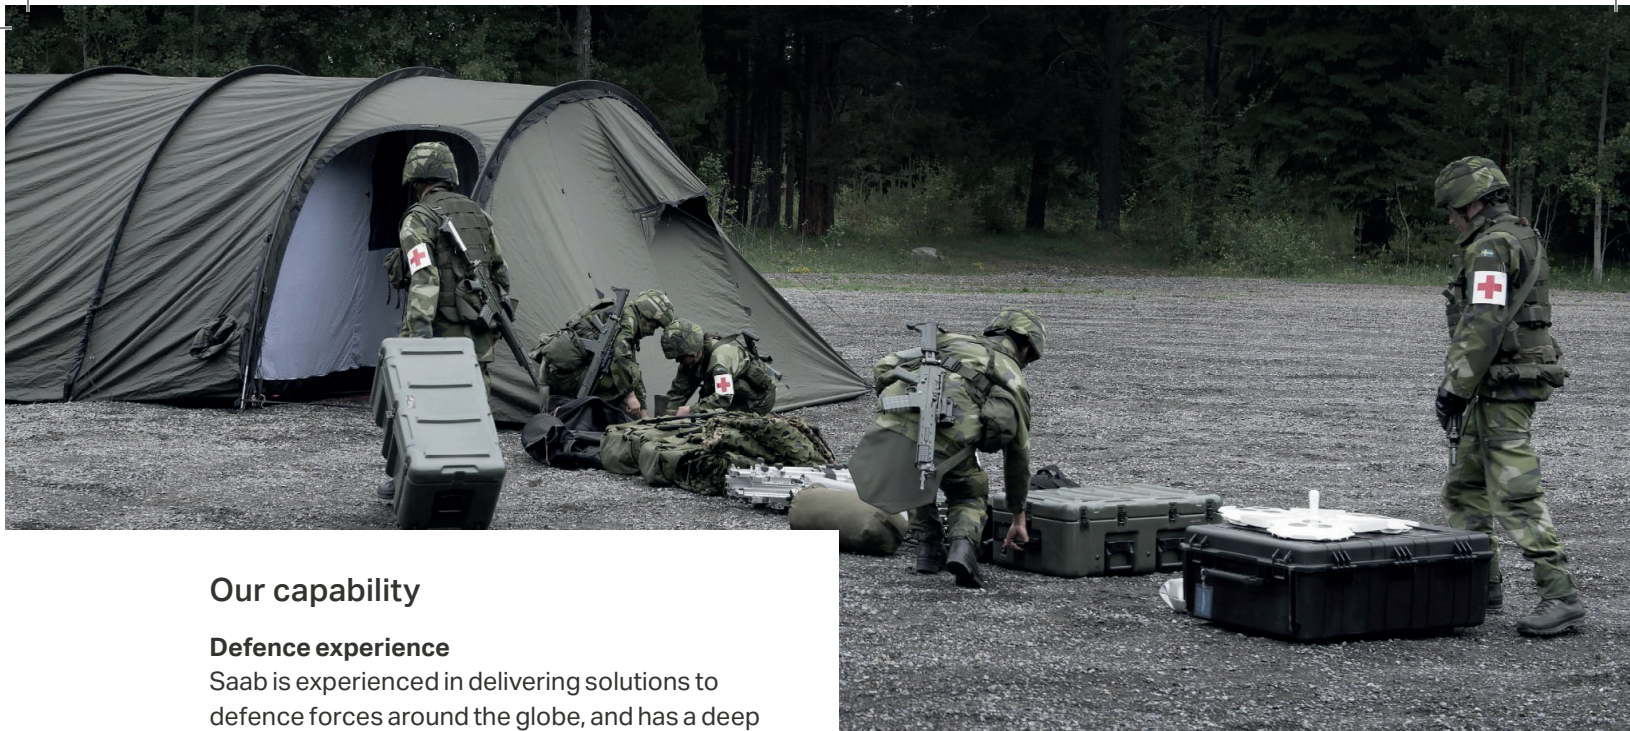

TACTICAL FRONTLINE SOLUTIONS

Our range of lightweight and highly mobile platform-independent capability modules allow clinicians to provide medical care close to the Point Of Injury (POI). Designed to deliver timely damage control care, these facilities can be soft or hard shelters and are transportable by road, rail or air.

FIELD HOSPITALS

Our field hospitals are advanced medical treatment facilities designed according to NATO standards, providing health and medical support in challenging operational conditions. The systems comprise hard and soft shelters, essential services, and customised medical kits in various sizes and layouts capable of seamless deployment.

Our capability

Defence experience

Saab is experienced in delivering solutions to defence forces around the globe, and has a deep understanding of the various local and regional standards and requirements.

Deployable medical facility design

Our deployable medical facility designs are compliant with specific requirements, incorporating containerised and soft-shelter systems, power, HVAC, water, waste, lighting, medical gasses, medical equipment, patient and clinician workflow, cold-chain management, sterilisation and transportation packaging.

System integration

The integration of complex systems enables safe transportation, rapid deployment and use in remote and austere environments. We incorporate locally available and accepted components into the solution's needs.

Project and contract management

We have extensive experience managing complex defence projects, incorporating a specialised team of engineering and medical professionals focused on field hospital projects.

Procurement and construction

Saab manages the procurement of items from multiple vendors and is responsible for the construction of the design using local partners and subcontractors.

Integrated Logistics Support (ILS)

Our ILS ensures full system capability, including training, documentation, maintenance, life cycle management, warehousing and supply chain management.

Our customers

Commonwealth of Australia (Australian Defence Force)

Government of Sweden (Swedish Armed Forces)

Norwegian Armed Forces

Latvian National Armed Forces

Further commercial in confidence defence projects

Next steps

We would like to understand more about your requirements and how our experience in deployable medical solutions can help achieve the medical care you require.
